## Meet AVLinkPro™ Intercom Communication

# SIPAHOY

Intercom Feature Extension for Crestron Home

**A**lexander Graham Bell, the Scottish-born innovator credited with patenting the first commercial telephone, originally suggested “**A**hoy-hoy” as the standard greeting when answering the telephone. ... “Hello” quickly eclipsed “**A**hoy,” but **B**ell answered the phone “**A**hoy” for the rest of his life.

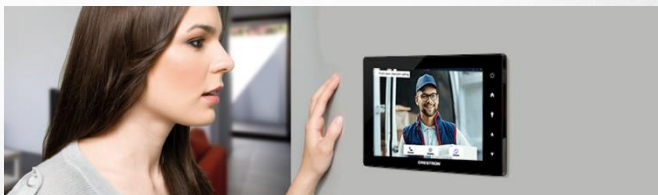

**AVLinkPro™** has partnered with Crestron electronics to develop a well rounded solution for Intercom in Crestron Home that allows multiple third party intercom devices to integrate smoothly and seamlessly with the **Crestron Home OS**.

**AVLinkPro™** is able to enhanced the features available in Crestron Home with intercom and with the CH-100 and a new supporting Extension Driver called **SIPAHOY**.

WORKS WITH

# CRESTRON HOME

Residential communication with family or visitors at home all while adding another layer of security to your smart home with a Crestron Home intercom system. Intercom systems eliminates the need to yell for family members across your home to get their attention. With the touch of a button, you'll provide instant room-to-room communication with other members of the household. Page to individual zones or the whole building. Additionally you can incorporate a video doorbell unit, giving the ability to see and speak with visitors at the front door or entrance gate.
